

Since 1968, LaRos Equipment Company has manufactured an extensive line of parts handling automation equipment, from individual units...to custom designed units and complete systems for total plant automation. All LaRos™ products incorporate the heaviest construction in the industry, application appropriate belting, large diameter pulleys, energy efficient drives, UHMW-PE slider surfaces, and name brand power transmission components. Units are mounted to a variety of unique machine stands available to provide easy maneuverability and portability. Custom painted mild steel construction is standard and stainless steel is optional on all units; structural aluminum is available on some models.

This engineered design with its exceptional features provides you with a clean, versatile, portable (if required), heavy industrial duty unit that is ready to run, quickly and easily serviceable if necessary, and assures years of optimum performance and durability.

MODEL E-530 DECLINE
(ROBOT UNLOAD)
CONVEYOR

MODEL E-525 INLINE
(UNDER PRESS) CONVEYOR

MODEL E-510 INCLINED
ELEVATING, OR GRINDER
FEED CONVEYOR
